Projects

- **Project Product Management:** This app was built with MEAN stack which uses Mongodb as database, angular4, bootstrap with one to many relationship complexity, It has new, update, show, delete, edit, create as RESTful environment.
Source code: <https://github.com/Kevin0920/fullmean-product-management.git>
 - **Market Items Management:** This app was built with MEAN stack which uses Cloud FireStore as real-time database. I installed Font-Awesome as toolkit, jQuery, Angularfire2, and Materialize to support this project. Users are able to add the items and write items' descriptions to the wish list.
Source code: <https://github.com/Kevin0920/addItem>
 - **YouTube search bar with API:** This app was built with react, YouTube API, and Bootstrap. When it runs, it will be functioning as YouTube search bar by typing keywords of the videos which you would like to search for. In addition, beside the search bar there is a vertical playlist layout on the right side. It shows all the relevant videos
